bhs/](http://www.azdhs.gov/bhs/)

## QUICK FACTS:

- Anyone drinking before the age of 15 has a 40% chance of developing an addiction. This is only 7% for those age 21 or older.
- Serving alcohol in your home to anyone under 21 is a class 1 misdemeanor.
- Underage drinking costs Arizonans over 1 billion dollars annually.
- Alcohol-related vehicle crashes cost Arizonans over 600 million dollars annually.
- In Arizona, alcohol is consumed more frequently than all illicit drugs combined and is the drug most associated with injury or death.

[Alcohol Awareness](#)

Approximately 14 million people in the United States are addicted to alcohol or abuse alcohol. This is a serious disease that can be prevented and treated. People who achieve recovery improve the quality of life for themselves and their loved ones.

## Do you know how much alcohol is in a standard drink?

In the United States, a "standard" drink is any drink that contains about 0.6 fluid ounces or 14 grams of "pure" alcohol. Click the image to learn more...

## Are you "binge drinking"?

Having 4 or more drinks during a single occasion is known as "Binge Drinking". It is defined as a pattern of drinking that brings a person's blood alcohol concentration (BAC) to 0.08% or above. This usually means about 5 drinks for men and 4 for women.

Binge drinking for women increases the risk for breast cancer, heart disease, and stroke, all of which are leading causes of death in women.

## Are you (or a loved one) drinking too much?

1. Do you drink alone when you feel angry or sad?
2. Does your drinking ever make you late for work?
3. Does your drinking worry your family?
4. Do you ever drink after telling yourself you won't?
5. Do you ever forget what you did while you were drinking?
6. Do you get headaches or have a hang-over after you have been drinking?

If you answered "yes" to any of these questions, you may have a drinking problem. Check with your doctor to be sure. [Click here](#) to learn how to cut down or quit your drinking.

## Are you concerned that your child may be drinking?

And you should be...Alcohol permanently damages a young person's developing brain! The following may indicate a youth is using alcohol: mood changes, school problems, a lack of involvement in former interests, smelling of alcohol, memory lapses, poor concentration, bloodshot eyes, lack of coordination, or slurred speech.

## Tips for Parents:

- Ask open-ended questions and then listen. Resist the temptation to dominate the conversation.
- Send a consistent, clear message that underage drinking is not acceptable behavior or a "rite of passage."
- Get to know your child's friends and help them find ways to avoid drinking when they feel pressured by peers. Help them decide how they will exit a situation that is uncomfortable, unsafe or against your rules.
- Set firm, no-alcohol boundaries. Parents and adults have more influence than they think to keep kids away from alcohol.
- Be home for all parties and require the parties to be free of alcohol.
